Manufacturers:
Are You Meeting Your **Emissions** Reporting Requirements?

Manufacturers are being pressured to report on their emissions – from their direct operations (Scope 1 and 2), as well as their supply chain and product emissions (Scope 3).

What does this mean for you?

This means that manufacturers at all levels of the manufacturing supply chain are now also feeling the burden of complying with reporting demands regarding their emissions and environmental impacts.

OEMs, Tier 1,2, and 3 suppliers all need to collect their own emissions data, compile, audit, and package the data, and then generate emissions reports for their supply chain customers.

The challenge

Gathering accurate and comprehensive data on Scope 3 emissions is complex and time-consuming, and dealing with large volumes of data as well as many reporting requests can be a serious logistical and administrative challenge.

We can help

IsoMetrix Lumina ESG management software helps manufacturers at all levels of the supply chain gather, track, and report on their emissions data.

It seamlessly integrates with other internal business systems, providing simplified reporting, data auditability, and the ability to keep all emissions information clear and organized.

Gather and track emissions data more efficiently

Due to the large volumes of data generated, gathering and tracking can become a complicated administrative task. IsoMetrix Lumina integrates with internal business systems to improve and automate data collection, while intuitive dashboards enable real-time emissions tracking.

Clear and organized data improves auditability and data quality

Emissions data sources located within different systems can lead to scattered and siloed information, degrading overall data quality. By providing a single source of truth for emissions, IsoMetrix Lumina improves data quality and increases organizational auditability. The clear and concise data enabled by Lumina simplifies the important auditing process, enhances strategic decision-making, and improves compliance.

Simplified emissions reporting

By leveraging thousands of emissions factors from the GHG Protocol, Part 98, DEFRA, and more, IsoMetrix Lumina automates greenhouse gas (GHG) calculations across Scopes 1, 2 and 3. Metrics can be linked to reporting demands, dramatically simplifying the up-chain emissions reporting requirements imposed by clients.

Dramatically reduced overall administrative burden

By streamlining emissions data sourcing, providing a unified platform, enabling instant situation analysis, and automating emissions calculations, IsoMetrix Lumina eases the considerable admin burden of supply chain reporting for Tier 1, 2, and 3 suppliers.

Don't fail to meet your customer demands regarding scope emissions data!

Transform your supply chain emissions management and reporting with IsoMetrix Lumina, the most modern ESG platform from the most trusted name in EHS.
